

CASE STUDY

Waterproofing of Overhead Tank Slab

Opebi, Lagos, Nigeria

BACKGROUND

Concrete Logistics were contacted by the client to waterproof a newly built tank slab to prevent any issues in the future.

SOLUTION

The floor and wall surfaces were prepped and all pipe penetration points were treated using the Specialized Krystol Pipe Penetration system. This was followed by the application of Laticrete Hydro Ban and Laticrete 302 surface applied treatments.

With these treatments comes the assurance that the tank will remain water tight for the entire life span of the concrete slab.

After Treatment
